

# The role of advanced biofuels in the EU's energy and climate strategy

#### **Kyriakos Maniatis**

#### Principal Administrator DG Energy, European Commission

### In 2050....

We are likely to need around **100 Mtoe of biofuels** that saves substantial amounts of GHG emissions.

**Today we use around 14 Mtoe**, but including estimated indirect effects, these biofuels only **save around 20%** GHG emissions compared to the fossil fuels they replace.

*In order to achieve the envisaged 80% reduction of GHG emission in 2050, we will need biofuels that save substantial amounts of GHG emissions (75% and more).* 

Such high savings are likely to be archived only with biofuels based on waste or residues or other types of advanced biofuels.

## The Policy Framework for renewable transport fuels

### **Fuel Quality Directive**

• 6% greenhouse gas reduction target in carbon intensity of road transport fuels in 2020

### **Renewable Energy Directive**

- 20% share renewable energy by 2020
- 10% renewable energy in transport by 2020

### Significant contribution to both FQD and RED is expected to come from biofuels

### The Commission proposal on ILUC:

- A limit of 5% to the amount of 1<sup>st</sup> generation biofuels that can count towards the Renewable Energy Directive targets
- Enhanced incentives for advanced non-land using biofuels (quadruple accounting)
- An increase to 60% greenhouse gas savings requirement for new installations
- ILUC-factors included in the reporting of greenhouse gas savings in both Directives

### **Council Working Party: ILUC issues**

- Cap of 7% for conventional biofuels
- Voluntary subtarget for advanced biofuels (excl. UCO/TME and RE electricity)
- all "advanced" feedstocks double counted towards the subtarget and the 10% target, some feedstocks (excl. UCO/TME) also double counted towards the overall RE target.
- ILUC-values for reporting of greenhouse gas savings in both Directives
- Increase multipliers for RE electricity (road 5, non-road 2.5)

### **European Parliament**

- ILUC resolution adopted 11 September (first reading)
- Early second reading ruled out (no negotiating mandate to the rapporteur)

### **EP ILUC resolution**

6% cap on land-using crops of 2020 (also for FQD and as sustainability criteria)

2.5% target for Annex IX part A and C (new). Only quadruple accounting for part C (algae, renewable fuel of non-bio origin, CCU, bacteria). Double counting of only UCO/TME (outside subtarget)

*ILUC-factors in the FQD accounting as of 2020* 

### Specific ethanol in petrol target (7.5%)

CCU fuels

*'non-food ligno-cellulosic material' dropped from Annex IX* 

*Biofuels used in aviation can also count towards the FQD target* 

*Waste hierarchy and the principle of cascading use* 

### **Next Steps**

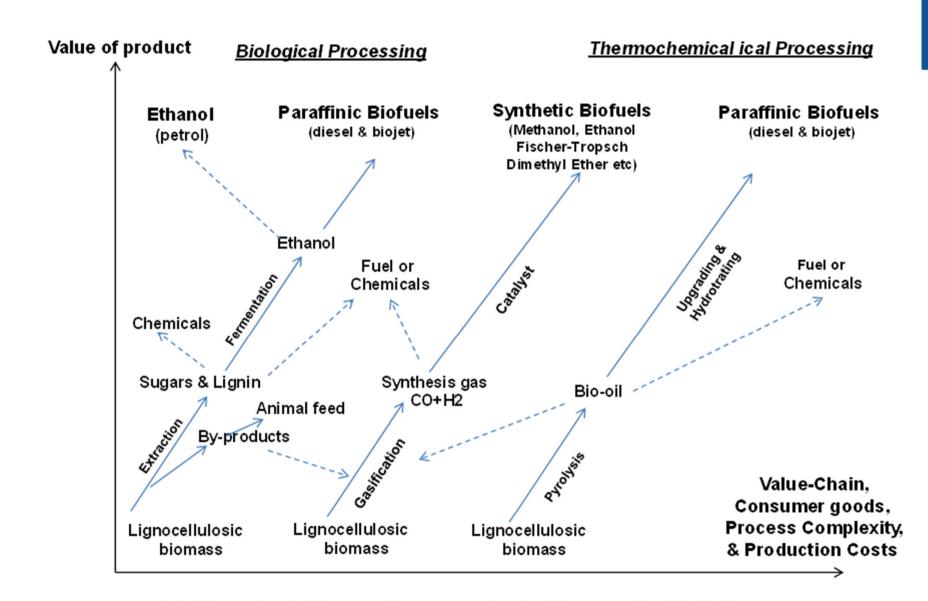

- Council Presidency works towards political agreement at December Energy Council (13.12.)
- Unclear how/when the second reading in the EP will take place (retreat in April)

### What have we achieved on Technology and Innovation under FP7

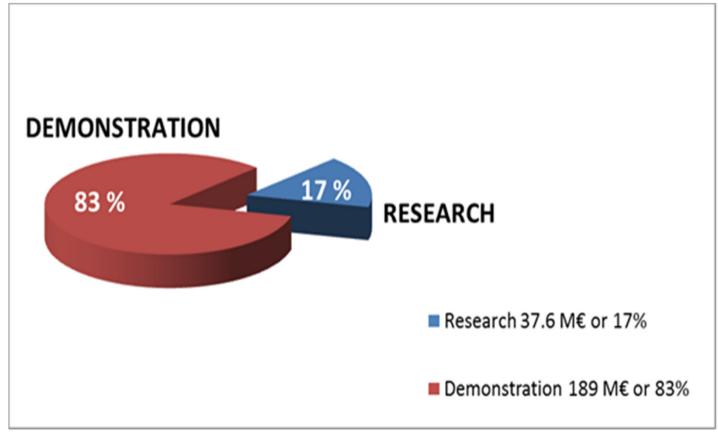

Additing value to biomass by processing to 2<sup>nd</sup> generation biofuels

### Total FP7 budget RD&D Biofuel 2G projects = 227 M Euro

EC Biofuel Cluster	Contract Acronym	Coordinator	Technology Provider	Biofuel	EC Support € M	Biomass	Production Capacity
Synthetic	OPTFUEL	VW	Choren Industries	Fischer- Tropsch	7.8	Wood	15,000 t/y
	<b>BIO DME</b>	Volvo	Chemrec	Dimethyl- ether	8.2	Black Liquor	600 t/y -150 days operation)
LG Ethanol	BIOLYFE	Chetex Italia	Chetex Italia	Ethanol	8.6	Various	40,000 t/y
	FIBREEtOH	UPM	UPM	Ethanol	8.6	Fibre	20,000 t/y

	BIOFAT	Abengoa	Alga Fuel	Biodiesel & ethanol	7.1	Algae	90t/ha.y algae on 10 ha
	INTESUSAL	СРІ	СРІ	Biodiesel	5.0	Algae	90t/ha.y algae on 10 ha
Bio-Jet	BFSJ	Swedish Biofuels	Swedish Biofuels	Bio-Jet & diesel	27.8	MSW, wood	5,000 t/y 5,000 t/y
	Biorefly	Chemtex Italia	Chemtex Italia	Bio-Jet	13.8	Lignin	2,000 t/y

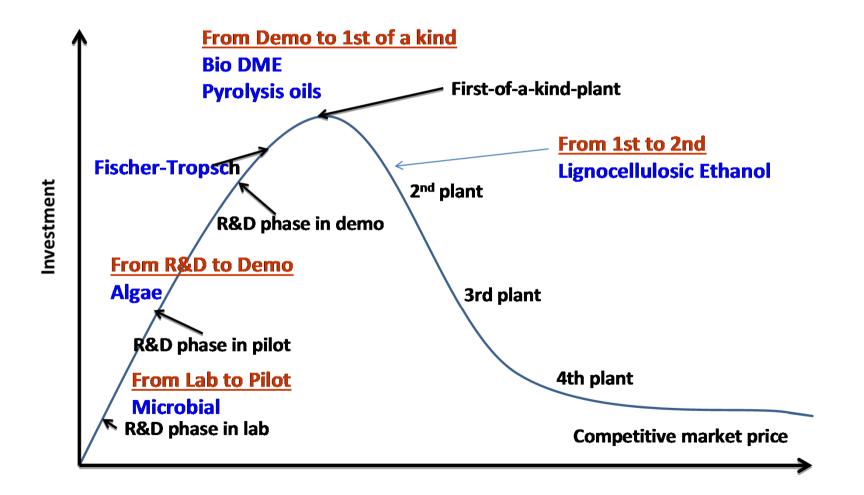

### **NER 300 projects**

Project	Biofuel	Member State	Funding MEuro
Ajos BTL	Fischer-Tropsch	Finland	88,5
BEST	Ethanol	Italy	28,4
CEG	Ethanol	Poland	30,9
<b>UPM Stracel</b>	Fischer-Tropsch	France	170,0
Woodspirit	Methanol synthetic	Netherlands	199,0
GoBiGas Ph 2	Biomethane	Sweden	58,8
Verbio Straw	Biomethane	Germany	59,1

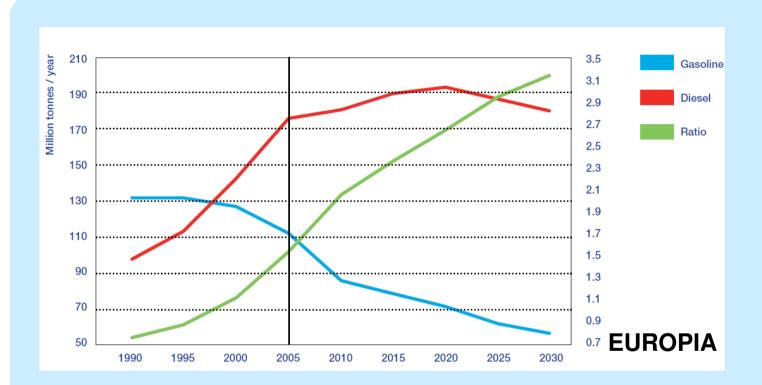

Technology Valley of death : Positioning of FP7 supported technologie:

### Diesel/Petrol balance continues to increase

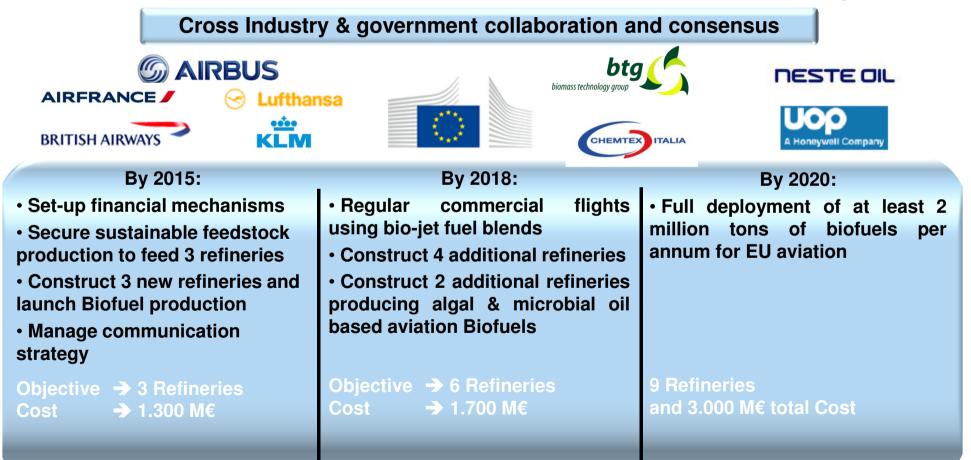

### Ethanol in diesel market Ethanol to bio-jet

### The European Biofuels FlightPath Initiative

#### 2 MTons of Aviation BioFuels in 2020 = 4% of EU fuel consumption

### Conclusions

- Biofuels remain essential for addressing current climate and energy challenges
- Advanced biofuels are particularly important in this respect and are promoted through
  - o Regulatory measures (ILUC)
  - o RTD measures (Horizon 2020)
